Simon Stirling

Solutions Engineering | AI & Cloud Architecture | Technology Leadership

Hadera, Israel | UK citizen with full UK working rights | Planning UK relocation

simonsbs@gmail.com | +972-54-5841058 | bestdev.co.il

Profile

Solution architect and technology leader with 20+ years across technical presales, enterprise software, cloud architecture and engineering leadership. CTO and co-owner at Flame-Ware Solutions, with experience leading approximately 25 direct reports across development, architecture, QA, infrastructure and technical support. Combines customer discovery, demonstrations and technical proposals with hands-on architecture and production delivery. Seeking full-time salaried roles in solutions engineering, AI and cloud architecture, or technology leadership. No UK visa sponsorship required.

Relevant strengths

- **Technical presales:** Customer discovery, requirements analysis, architecture options, prototype demonstrations, technical proposals, delivery estimates and implementation handover.
- **AI and data:** Production LLM document-processing architecture and delivery; document-based RAG prototyping; enterprise data integration and quality reporting.
- **Cloud and engineering:** Azure, AWS and GCP architecture; C#/.NET, Python, REST APIs and SQL Server; Docker, Kubernetes, CI/CD and infrastructure as code.
- **Leadership and commercial responsibility:** Engineering recruitment, mentoring, technical direction, resource allocation, budget planning, cost estimates, supplier expenditure and project profitability.
- **Communication and enablement:** Architecture documentation, technical presentations, developer training and practical AI workshops for technical and business audiences.

Professional experience

Flame-Ware Solutions Ltd

CTO, Lead Solution Architect and Co-owner | 2005 to present

- Own technical strategy, architecture and engineering delivery across enterprise applications, cloud platforms, integration and AI-enabled systems.
- Lead customer discovery, evaluate architecture alternatives, prepare technical proposals and develop prototype demonstrations. Approved proposals have progressed into production delivery.
- Led approximately 25 direct reports across development, architecture, QA, infrastructure and technical support. Define hiring requirements, assess candidates, onboard engineers and develop technical leads.
- Take responsibility for resource budgets, estimates, implementation and support pricing inputs, supplier costs and delivery capacity against contracted revenue.
- Lead production LLM document-processing delivery using .NET services, REST APIs and SQL Server, including integration, validation, access controls, logging and human review.

Brama Technological Lab

Lead IT Architect, Head of R&D, Sales and Support | 2017 to present

- Lead infrastructure and secure-systems architecture, technical assessment, R&D, customer onboarding and support operations.
- Develop tailored technology solutions, prototypes and product evaluations; work directly with customers, suppliers, manufacturers and technical teams.

Selected delivery evidence

Enterprise LLM document processing

Led architecture, development and production delivery at Flame-Ware Solutions. The platform analyses documents, extracts information and produces contextual summaries and structured workflow responses. Responsibilities covered LLM integration, API design, security, validation, human review and deployment strategy. Production supports operational users and recurring document workloads.

Enterprise cloud discovery and delivery

Led a Flame-Ware cloud opportunity for a customer with fragmented inventory and operational systems. Owned discovery, architecture options, technical proposal and prototype demonstrations; worked with customer stakeholders and suppliers on dependencies and implementation risks. The approved proposal progressed into production, improving visibility and reducing manual processes.

Pharmaceutical manufacturing data integration

Led architecture and production delivery of a data-integration and quality-management solution at Flame-Ware. Defined SQL Server data models and integration interfaces, and oversaw collection, validation, reporting and audit trails supporting Continued Process Verification and quality-investigation traceability. Improved visibility and standardised reporting while reducing manual consolidation.

Document-based RAG proof of concept

Personally implemented document ingestion, embedding, retrieval and LLM integration using Python, LangChain, ChromaDB, Ollama and Streamlit. The working proof of concept includes local model inference, source visibility and retrieval metadata for manual verification.

Teaching and earlier career

- **Technology lecturer and technical trainer, 2010 to present:** Educational institutes, HackerU and independent teaching. Develop curricula and teach software development, databases, cloud, APIs and architecture to students, developers and enterprise teams.
- **CoolVision, Head of R&D / Development Team, 2004 to 2005:** Led developers and database specialists on a global platform using live video broadcasting and streaming.
- **Public-sector medical-services technology branch, Head of Development and Systems Analysis, 2000 to 2004:** Led secure client/server and intranet systems for HR, personnel management and internal operations, alongside support and user training.

Education and selected professional development

- **BSc Computer Science:** University of the People, completed.
- **AI:** IBM Generative AI Engineering specialisation; RAG and LangChain course work; Anthropic Academy modules covering Agent Skills, the Claude API, MCP and Claude Code.
- **Cloud and delivery:** AWS Cloud Solutions Architect Coursera specialisation; Google Project Management specialisation; historical Microsoft MCPD, MCTS and MCP credentials.
